PROFESSIONAL SUMMARY

Detail-oriented Business Analyst with 3.2 years of experience in end-to-end requirements elicitation, stakeholder management, and SDLC delivery across IoT-enabled CMMS platforms, ERP/CRM implementations, and blockchain/DApps-driven enterprise applications for Singapore Government bodies and global enterprise clients. Proficient in Agile/Scrum methodology, business process re-engineering, and translating complex business needs into BRDs, FRDs, use cases, user stories, and UAT artifacts. Experienced in digital transformation delivery, change management, impact assessment, as-is/to-be gap analysis, requirements traceability, and root cause analysis across cross-functional enterprise teams.

SKILLS

Requirements & Documentation: BRD, FRD, Use Cases, User Stories, Acceptance Criteria, RTM, MoSCoW Prioritisation, Impact Assessment

Methodologies: Agile / Scrum, SDLC, UAT, Sprint Planning, Backlog Management, Change Management

Business Analysis: Requirements Elicitation, Gap Analysis, As-Is / To-Be Analysis, Business Process Re-engineering, Root Cause Analysis, Feasibility Assessment

Technical Tools: SQL (PostgreSQL, SQL Server), Postman, GitHub, JIRA

Modelling & Design: MS Visio, Lucidchart, Workflows, Wireframes, Process Mapping

Testing: Manual & Regression Testing, Functional Testing, QA, Defect Management

Data & Analysis: Advanced Excel, Data Analysis, Data Cleaning, SWOT, Competitor Research, KPI Tracking

ERP & CRM Tools: Dynamics 365 CRM & ERP, Power Apps, Power Automate

Domain Knowledge: IoT & CMMS Implementation, Blockchain & DApps Testing, Facility Management, Stakeholder Management, Training & User Manuals

PROFESSIONAL EXPERIENCE

Aptiv8 IT Solutions | UBI Techpark, Singapore

Business Analyst & Implementation Lead

Nov 2024 – Feb 2026 (1 Year 3 Months)

Project: CMMS & IoT Implementation – Facility Management Platform

Clients: Singapore Government & Enterprise (NUS, SIT, SUPCT, MOH, MHA, NTU, LTA, MTI, Republic Plaza, ST Logistics)

Aptiv8 delivers CMMS and IoT-enabled facility management solutions to Singapore government bodies and enterprise clients. The platform supports asset lifecycle management, fault reporting, SLA monitoring, and environmental quality tracking across large-scale government buildings and campuses.

- Elicited and documented requirements from 10 Singapore government and enterprise clients through stakeholder interviews, workshops, and JAD sessions; produced BRDs, FRDs, use cases, user stories, and acceptance criteria, reducing requirement change requests by ~30% post-sign-off.
- Maintained a Requirements Traceability Matrix (RTM) across the full SDLC, achieving 100% requirement coverage and zero missed deliverables across all client engagements.
- Managed 2 parallel implementation streams (CMMS and IoT-enabled CMMS) covering maintenance workflows, purchase orders, schedule maintenance, asset and location management — delivered on time for all 10 clients.
- Facilitated sprint planning and backlog grooming across Agile sprints, maintaining consistent on-scope delivery and contributing to a 20% reduction in sprint carry-overs through clear acceptance criteria.
- Executed SQL-based bulk data uploads and cleaning operations for asset and location datasets across 10 client environments, reducing data migration errors by ~40% compared to manual processes.
- Delivered IoT deployments covering energy, water, BTU, and IAQ monitoring — onboarded Milesight UC300, HF2411, and RS485 gateways at LTA Buildings, Republic Plaza, and MTI, enabling real-time environmental tracking across 3 major sites.
- Led end-to-end UAT for all 10 clients; authored test cases and acceptance criteria resulting in zero critical defects at go-live and stakeholder sign-off achieved on first submission in 8 of 10 projects.

- Delivered post-go-live product demos, conducted client training walkthroughs, and maintained user manuals and requirement documentation to ensure smooth user adoption with no post-launch rollback requests.
- Conducted as-is / to-be process analysis and impact assessments ahead of each client deployment; led change management communication to minimise delivery risk and ensure seamless go-live transitions.
- Performed root cause analysis on recurring data and workflow issues; drove business process re-engineering initiatives that reduced operational inefficiencies across 3 client environments.
- Conducted competitor benchmarking across 5+ CMMS platforms, producing insights that directly informed 3 product roadmap decisions in collaboration with internal stakeholders.
- Explored Flowise AI (cloud-based no-code LLM platform) to prototype a RAG (Retrieval-Augmented Generation) workflow for querying CMMS documentation and client requirement artefacts, demonstrating potential to reduce manual information retrieval time across project teams.

Clarisco Pvt. Ltd. | Madurai, India

Business Analyst & QA Analyst – Blockchain Product Division

Nov 2022 – Oct 2024 (2 Years)

Clients: Centralised & Decentralised Cryptocurrency SaaS Platform; DApps – Russia

Supported Clarisco's product division across multiple engagements spanning blockchain/DApps platforms, healthcare digital transformation, and enterprise HRMS implementation — analysing requirements and validating releases through the full Agile SDLC.

Project 1: Blockchain & DApps Platform – BA & QA

Tools: JIRA, Postman, GitHub, SQL, Agile/Scrum

- Analysed requirement and specification documents for 2 blockchain platforms (centralised exchange + DApps), translating business needs into structured test cases, test plans, and acceptance criteria covering 200+ test scenarios.
- Partnered with development and product teams across Agile sprints – sprint planning, backlog grooming, and retrospectives – helping reduce defect leakage to production by ~35% through early requirement gap identification.
- Coordinated stakeholder sign-off and defect resolution via JIRA and Postman, maintaining traceability across 15+ releases and achieving timely, bug-free delivery on all major milestones.
- Validated transaction processing, smart contract verification, and core workflows (login, token purchase) through positive and negative test scenarios, ensuring zero critical payment defects at go-live.
- Conducted competitor benchmarking across Binance, Polygon, and Ethereum, identifying 10+ feature gaps that directly informed product backlog prioritisation and roadmap decisions.

Project 2: Patient Support Program (PSP) – CRM Application | Healthcare Domain

Tools: JIRA, SQL, Advanced Excel, MS Visio, Agile/Scrum

Supported requirements elicitation and QA delivery for a digital transformation of a patient management system, collaborating with clinical, operations, and business stakeholders to translate complex healthcare workflows into structured BRDs, FRDs, and user stories.

- Conducted current vs future-state workflow analysis for patient registration and care coordination; identified process gaps and reduced turnaround time by 18% while ensuring compliance with healthcare data privacy standards.
- Managed product backlog, prioritised user stories using MoSCoW prioritisation, and maintained requirements traceability across the end-to-end SDLC in an Agile environment.
- Led UAT by authoring test cases and tracking defects in JIRA; performed data-driven KPI analysis using SQL and Advanced Excel to validate data integrity before go-live.
- Maintained RTM throughout the project lifecycle, ensuring 100% requirement coverage and coordinating stakeholder sign-off across clinical and operations teams prior to production release.

Project 3: HRMS – ERP Application | Human Resources Domain

Tools: JIRA, SQL, Advanced Excel, MS Visio, Agile/Scrum

Gathered and documented cross-functional stakeholder requirements for an enterprise HRMS implementation; translated business needs into BRDs, FRDs, functional specifications, and process flow diagrams covering end-to-end HR operations.

- Designed and documented modules covering employee management, attendance tracking, performance evaluation, and offboarding; conducted feasibility assessments and gap analysis between existing workflows and the target ERP solution.

- Produced detailed as-is and to-be process maps in MS Visio; facilitated stakeholder walkthroughs to validate workflow changes and obtain sign-off before development commenced.
- Supported end-to-end UAT planning and execution; coordinated stakeholder sign-off and ensured seamless data migration and user adoption at go-live with zero rollback incidents.
- Reduced HR processing time by 30% through workflow optimisation and process re-engineering; tracked post go-live KPIs to validate solution impact and confirm delivery against SLA targets.
